Student visa (subclass 500) with work rights: 48 hrs per fortnight in semester, full-time in breaks

Level 1 SOC Analyst | Junior Security Analyst | Cybersecurity Intern

SUMMARY

Second-year Bachelor of IT (Cybersecurity) student at RMIT with hands-on experience in memory, network and log forensics, Windows and Linux security, and secure cloud deployment on AWS. Nine months of practical infrastructure work managing SSL/TLS certificates, DNS and production deployments. Comfortable with overnight shift work, and currently working through the TryHackMe SOC Level 1 path. Available for internship, part-time or graduate SOC roles.

TECHNICAL SKILLS

- **Forensics and investigation:** Volatility 3 (pslist, psscan, psxview, handles, dlllist), Wireshark, Autopsy, FTK Imager, log analysis with grep/awk, file signature checks, hash verification, VirusTotal, MITRE ATT&CK
- **Windows security:** event logs and Defender Event IDs (5001/5007), persistence locations (Run keys, startup folder, scheduled tasks), UAC, BitLocker, Windows Firewall
- **Networking and labs:** Kali Linux, Metasploitable 2, VirtualBox, TCP/IP, DNS, ports and protocols
- **Cloud and DevOps:** AWS (EC2, VPC, S3, load balancers), Terraform, Ansible, Docker, GitHub Actions, Git
- **Systems and scripting:** Linux (Kali, Ubuntu), SSH, permissions, /var/log review, Python, Bash, SQL
- **Cryptography:** RSA, AES-GCM, RSA-OAEP hybrid encryption, ElGamal, Paillier, Hashcat

CYBERSECURITY PROJECTS

Secure multi-tier deployment on AWS | RMIT, individual 2026

Terraform, AWS, Ansible, Docker, GitHub Actions, PostgreSQL

- Built a VPC with subnets in two availability zones and five EC2 instances using Terraform, with remote state in S3.
- Placed the app behind public and internal load balancers, with security groups allowing traffic only through them.
- Automated deployment with Ansible and GitHub Actions, storing AWS and database credentials in GitHub Secrets.
- Reviewed my own code and identified an SSH default of 0.0.0.0/0 in Terraform and a fallback database password, with fixes documented.

Network and log forensics investigations | RMIT, team and individual 2026

Wireshark, Kali Linux, Bash, ExoneraTor, VirusTotal, MITRE ATT&CK

- Identified the attacking host in an HTTP flood capture using display filters and Protocol Hierarchy and Conversations statistics.
- Recovered a disguised file from HTTP traffic, confirmed its true type from its magic bytes and checked its SHA-256 hash on VirusTotal.
- Analysed Apache access logs with grep, awk, sort and uniq, traced attacker IPs, and mapped the attack to MITRE ATT&CK.

Memory and disk forensics | RMIT 2026

Volatility 3, Autopsy, FTK Imager

- Installed Volatility 3 from source and cross-checked pslist, psscan and psxview output on a Windows memory dump to detect hidden processes.
- Acquired and verified a USB disk image with FTK Imager, and recovered deleted files in Autopsy.

Penetration testing lab | Personal 2025

Kali Linux, Metasploitable 2, VirtualBox

- Built an isolated VirtualBox lab to practise attacks safely, and documented the setup and testing method.

Password placement research | Independent 2026

Hashcat, RockYou dataset

- Tested whether special-character placement rules crack more passwords than Hashcat's best66 baseline, and wrote it up as an IEEE-format paper reporting the negative result.

Applied cryptography | RMIT, team 2026

Python, PyCryptodome, Pillow

- Implemented RSA from scratch with Miller-Rabin prime generation, AES-256-GCM with RSA-OAEP hybrid file encryption, and hid an AES-encrypted message in JPEG metadata.

EXPERIENCE

Web Development Intern (unpaid) | Ryven.co, Melbourne Feb 2026 – Present

- Configured and renewed SSL/TLS certificates and managed DNS records across client sites on cPanel and VPS servers.
- Ran staging-to-production deployments and pre-launch QA, and wrote technical handover documentation.
- Integrated payment gateways, email APIs and analytics with secure handling of credentials and API keys.
- Built admin panels and database-backed features in Laravel and React, and resolved prioritised client bug tickets.

Crew Member | Coles CFC, Truganina Dec 2025 – Present

- Monitor and resolve exceptions in a high-volume automated fulfilment system on night shift, escalating issues to team leads by priority under time pressure.

EDUCATION

Bachelor of Information Technology (Cybersecurity) | RMIT University, Melbourne Expected 2027

- Relevant units: Computer and Internet Forensics, Security in Computing and IT, Systems Deployment and Operations, Cloud Foundations, Blockchain Technology Fundamentals, Essentials of IT and Ethics.

CERTIFICATIONS AND TRAINING

- CompTIA Security+: in progress
- TryHackMe SOC Level 1 path: in progress. Completed Cyber Security 101, Linux Fundamentals and Windows Fundamentals 1–3.
